

Steam generators

S-Team 6 is the professional steam cleaner designed for cleaning and sanitizing environments and surfaces. The production of dry steam at 165°C and an operating pressure of 6 bar, along with the high productivity (it is possible to recharge the machine without turning it off), guarantee excellent cleaning results without the use of detergents. For the most stubborn dirt, the "Hot Water" function can be activated directly from the handle of the hose. A jet of high temperature wet steam is added to the normal delivery of dry steam (taken directly from the boiler). Strength and manoeuvrability make S-Team 6 an extremely versatile machine able to work in any type of environment; thanks to the TurboPower function it is possible to activate one or both resistances in the boiler, allowing the machine to operate at 2200 W (as well as the maximum power of 3200 W). Thanks to this function it is possible its application both in home use and commercial areas characterized by low voltage electrical systems. The wide range of standard and optional accessories completes the offer and allows S-Team 6 to work in any type of environment (floors, glass, steel, fabrics and hard surfaces).
